**Design Concept:**

This product can disinfect food so you're safe from food poisoning. For example, if you put an apple from 2001 in the food bot it would disinfect it to make it safe to eat! This design is innovative because this can take out food poisoning and no one has designed that yet!

# foodbot

a project by Ashleigh Robinson

Step 1 - Load

Place perished food item inside of Foodbot. In this example it is a 1 year old Apple

Step 2 - Start

Using a combination of UV disinfectant rays, electrical cords, metal, buttons, glass, and a turning tray, the food starts to disinfect inside Foodbot.

Step 3 - Eat!

Now your apple is completely safe to eat
